***Examiner's Amendment***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Timothy Cassidy on July 29, 2008.

The application has been amended as follows: Change the status of claims 5-14, 17-21, 23, 24, 27-30 from "withdrawn" to --previously presented--.

***Allowable Subject Matter***

2. Claims 1-30, 32-35, and 37-41 are allowed.

The following is an examiner's statement of reasons for allowance: A body and environment monitoring system comprising: at least one bio-sensor associated with a body and configured to generate sensor-data related to at least one body-parameter, retrieve environmental-data stored in electronic tags associated with items in an environment wherein said electronic tags remaining with their respective associated item within the environment such that said electronic tag scanning device retrieves the environmental-data when the monitored body comes within a predetermined range of said electronic tags, said stored environmental data relating to a characteristic of the associated item that is relevant to interpretation of the bio- sensor data. Moreover, the prior art indicates that this particular system is novel and has not been published or patented by other entities.

Martin discloses tag to tag communication wherein when one tag is within a predetermined distance of a second tag, the tags determine if and what information has been communicated between the tags. However, Martin does not disclose a tag scanning device that retrieves environmental-data when a monitored body comes within a predetermined range of said electronic tags, because with Martin, the tag is already attached to the monitored body and therefore, the body would never come within a predetermined range of the tag.

Similarly, Reisman discloses communicating data between a tag and a receiver, when a tag, worn on a body, comes into range of a receiver (not a tag). Again, since a tag is already worn on a body, the tag never has the opportunity to be either outside or inside of a predetermined range of the monitored body (according to the present invention - within a predetermined range of a monitored body).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Reisman et al. (US 6,998,985).

Martin et al. (US 6,977,586).
